LocKall[™]

Virtual Lock for
Corporate IP Telephony v 3.0

When corporate IP telephony becomes a value-adding solution for your company, its optimum use is of primary importance at the moment of supervising and evaluating the security of an extension and its user.

- ▶ **LockCall** is a virtual phone lock for corporate IP telephony; a software that provides a password for each user to control access to their designated phone.

- ▶ **LockCall** is the perfect security solution for IP communication technology.

- ▶ When **LockCall**, becomes active, the phone locks. To unlock it, you only need to enter the corresponding password.

LockCall, only you will make that call!

Main Characteristics:

▪ “Security”

Each extension is controlled by its given user by an individual password.

▪ “XML Dialog”

Easy, friendly interaction between user and software over XML interface displayed on IP phone set screen, adapted to the corresponding phone set model.

▪ “One to One Lock”

LockAll's flexibility permits the use of personalised locks: "one to one".

For example;

1. Disabling calls outside the company only.
2. Total phone locking.

▪ “Scaleability”

When new phones are incorporated to your network, you will only need to add extra LockAll licences; no additional hardware will be required.

How does it work?

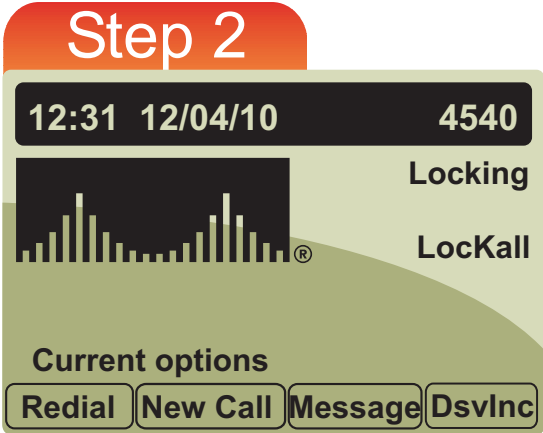

LockAll has a simple yet highly efficient activation mode:

By pressing the LockAll service button (depending on your phone set model), an XML application will display on your IP phone set screen, informing the phone set has been locked.

Enter your personal password, accept, and your phone set will be unlocked.

Your personal password will be provided by the system administrator at first; then, the user will be able to change it to any desired combination.

Adportas LockKall - Locking:

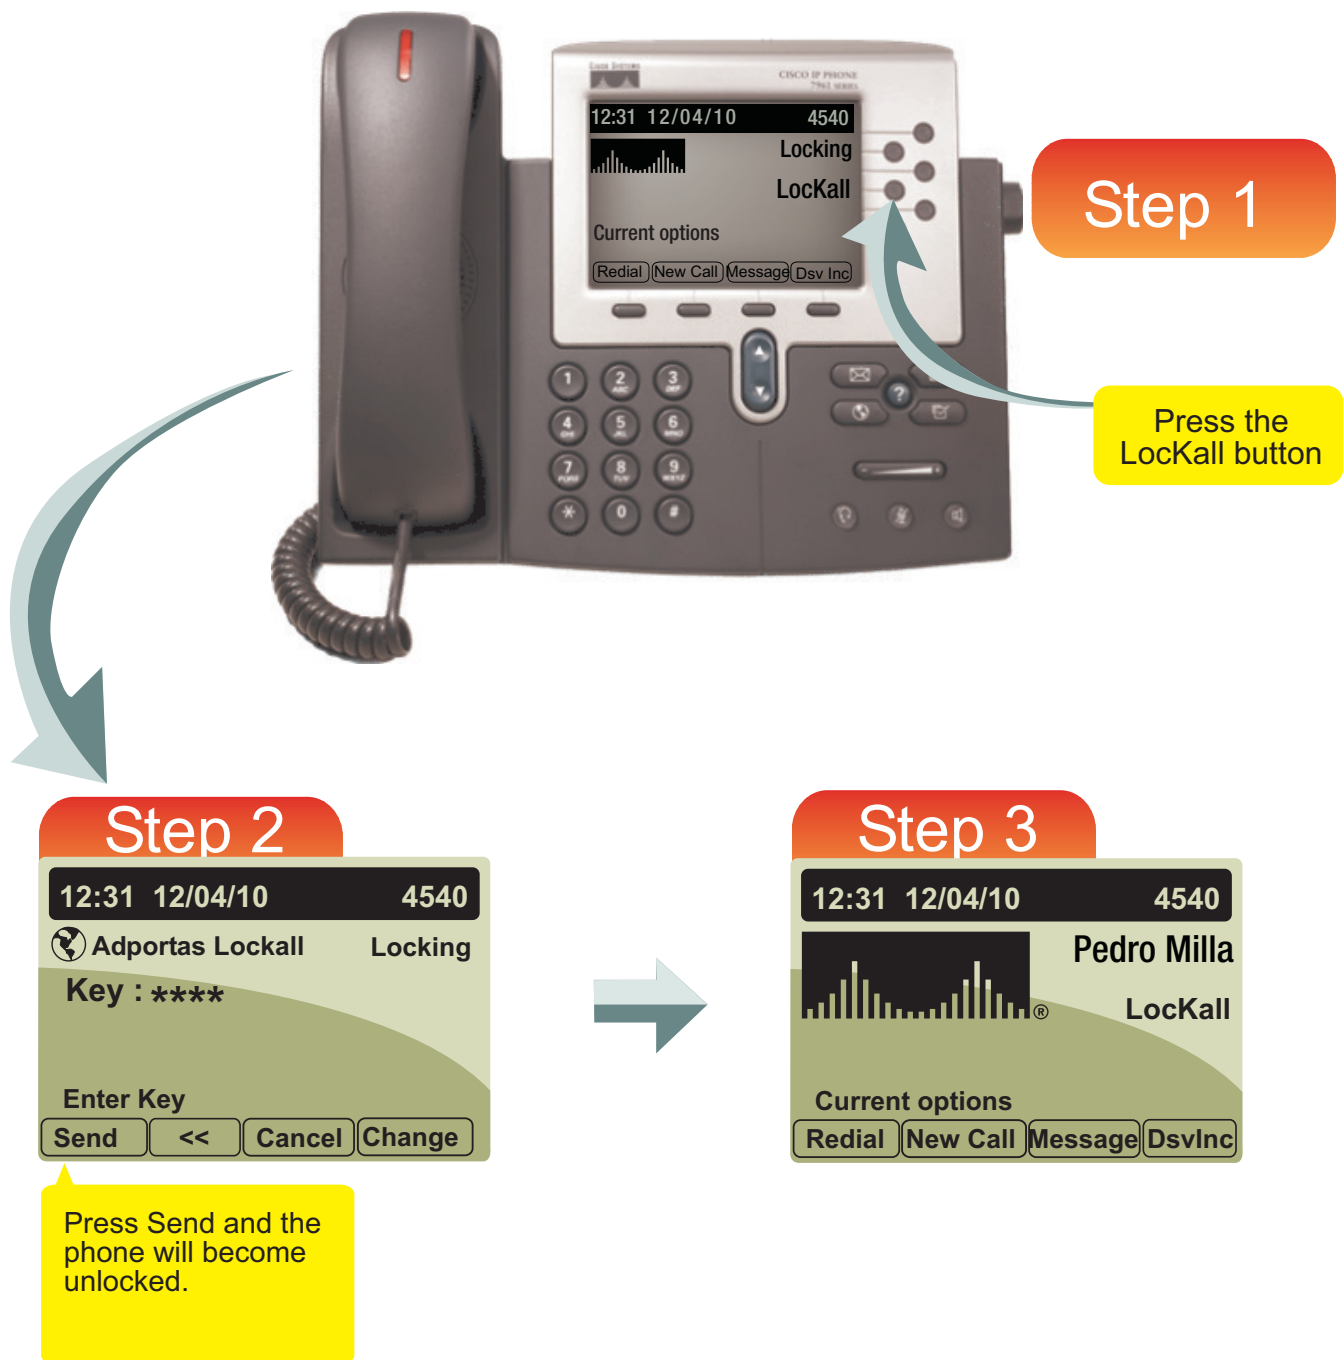

Includes a massive locking application by time schedules, according to cost centers.

- Extension screen locking.
- When phone is locked, certain predetermined calls can still be made.
- Massive locking option makes sure that no extension remains unlocked.

Adportas LockAll - Unlocking

Press the LockAll button; then enter your personal password by dialing it on your phone set. Press Send, and your phone will be unlocked.

Requirements:

- * Web port for Call Manager to access XML Configuration Services, set on Call Manager control.
Application server: according to technical evaluation.

Compatibility:

LockKall is compatible with CISCO* IP Telephony Platforms operating with Call Manager v 3.3 or higher.
