# MessageKall

Paging Solution for VoIP V 2.5

## Description:

**MessageKall** allows the distribution of audio and text messages for your Cisco IP telephony network. These messages can be distributed live or through preconfigured messages. **MessageKall** integrates transparently to your company's Cisco IP telephony structure.

## Characteristics:

- Send text messages to individuals or predefined groups.
- Create paging groups in a flexible way.
- Manage your paging system users.
- Select the number of times you wish to transmit a message.
- Access the MessageKall administrator via web interface.
- Send audio broadcasts to Cisco IP telephones, or to your speaker network through the server.

## MessageKall Uses:

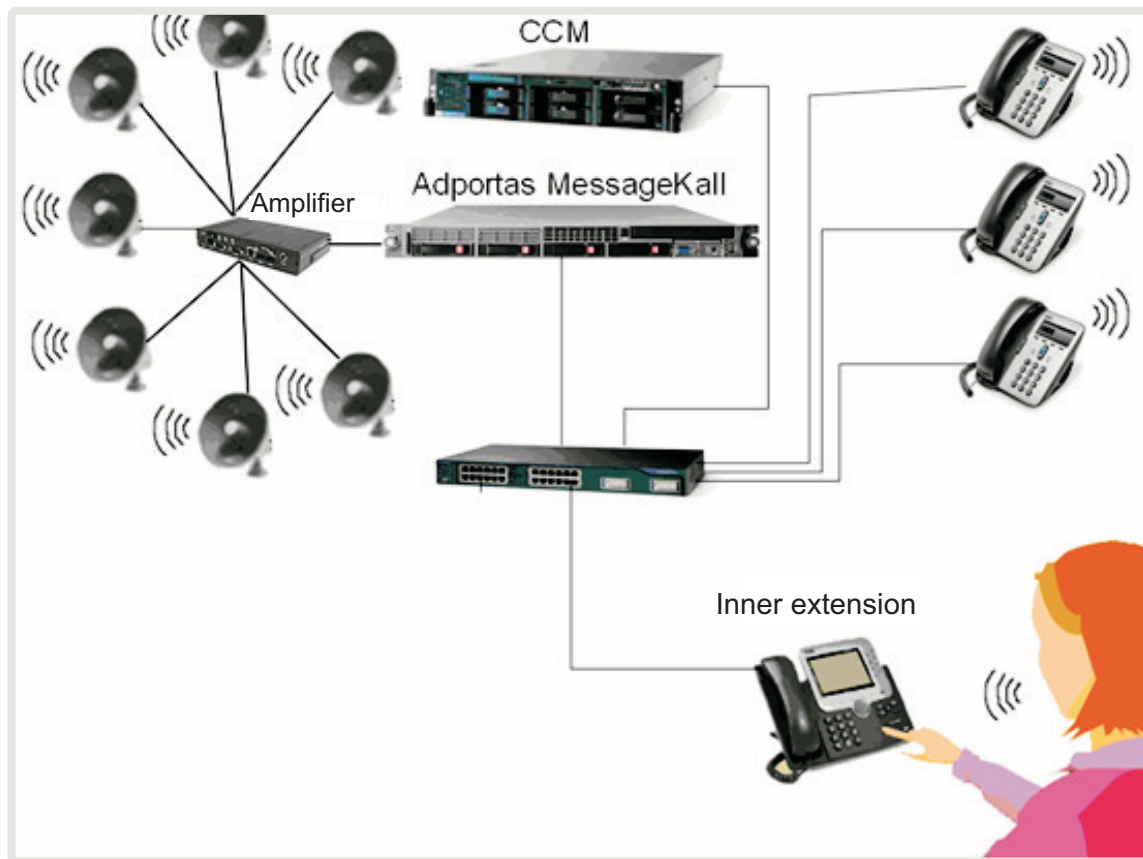

- Selective Communication. Organize IP phone groups to send different messages to each group.
- Priority Message. Inform your employees about crucial events such as emergencies.
- Hourly sound notifications. Send periodical sound notifications using ringtones of your choice.
- Send instant text messages, person to person.
- Corporate Messages. Allows areas of the company to send messages to the entire organization or sections of it.

Sending Instant Text Messages.

Priority Messages to Predifined Groups.  
Inform your employees about crucial events  
such as emergencies.
